
UMASS LOWELL

The Climate System Dynamics Group in the Department of Environmental, Earth, and Atmospheric Sciences (EEAS) at the University of Massachusetts Lowell is recruiting a PhD student interested in studying land-atmosphere interactions in the context of weather and climate extremes. Research will use climate model simulations and observations to examine the influence of vegetation and soil characteristics on high-impact events including extreme heat and humidity, drought, and pluvials.

UMass Lowell is an R1 University located in the Merrimack Valley of Massachusetts, 45 minutes north of Boston. You can learn more about the department's new PhD program in Earth System Science here:

<https://www.uml.edu/sciences/eeas/programs/graduate/doctoral-ess.aspx>

Applicants should hold a B.S. in atmospheric science, earth science, physics, computer science, or a related field, and should contact Prof. Christopher Skinner by email: christopher_skinner@uml.edu to ask questions and discuss potential research projects. In your initial email please include a brief summary of your research interests, experiences, and career goals, along with a CV (including relevant coursework).
